

How to build a modern car sharing system in 6 month

and reduce fleet management
operational costs by 30%

Why did a customer choose Steinpilz?

Steinpilz **has experience** with IT products in automotive

Steinpilz **provides full stack expertise** from backend to mobile apps

Steinpilz has office **in DE**, which makes meetings onsite easy

Who is a **client**

- Is an automotive company which supplies premium cars and manufacture commercial vehicles
- Works all over the world
- Is number 20 in Fortune Global 500 ranking

What are business goals & challenges

Ensuring effective usage
of corporate car fleet

Improving employees' mobility
without extra cost

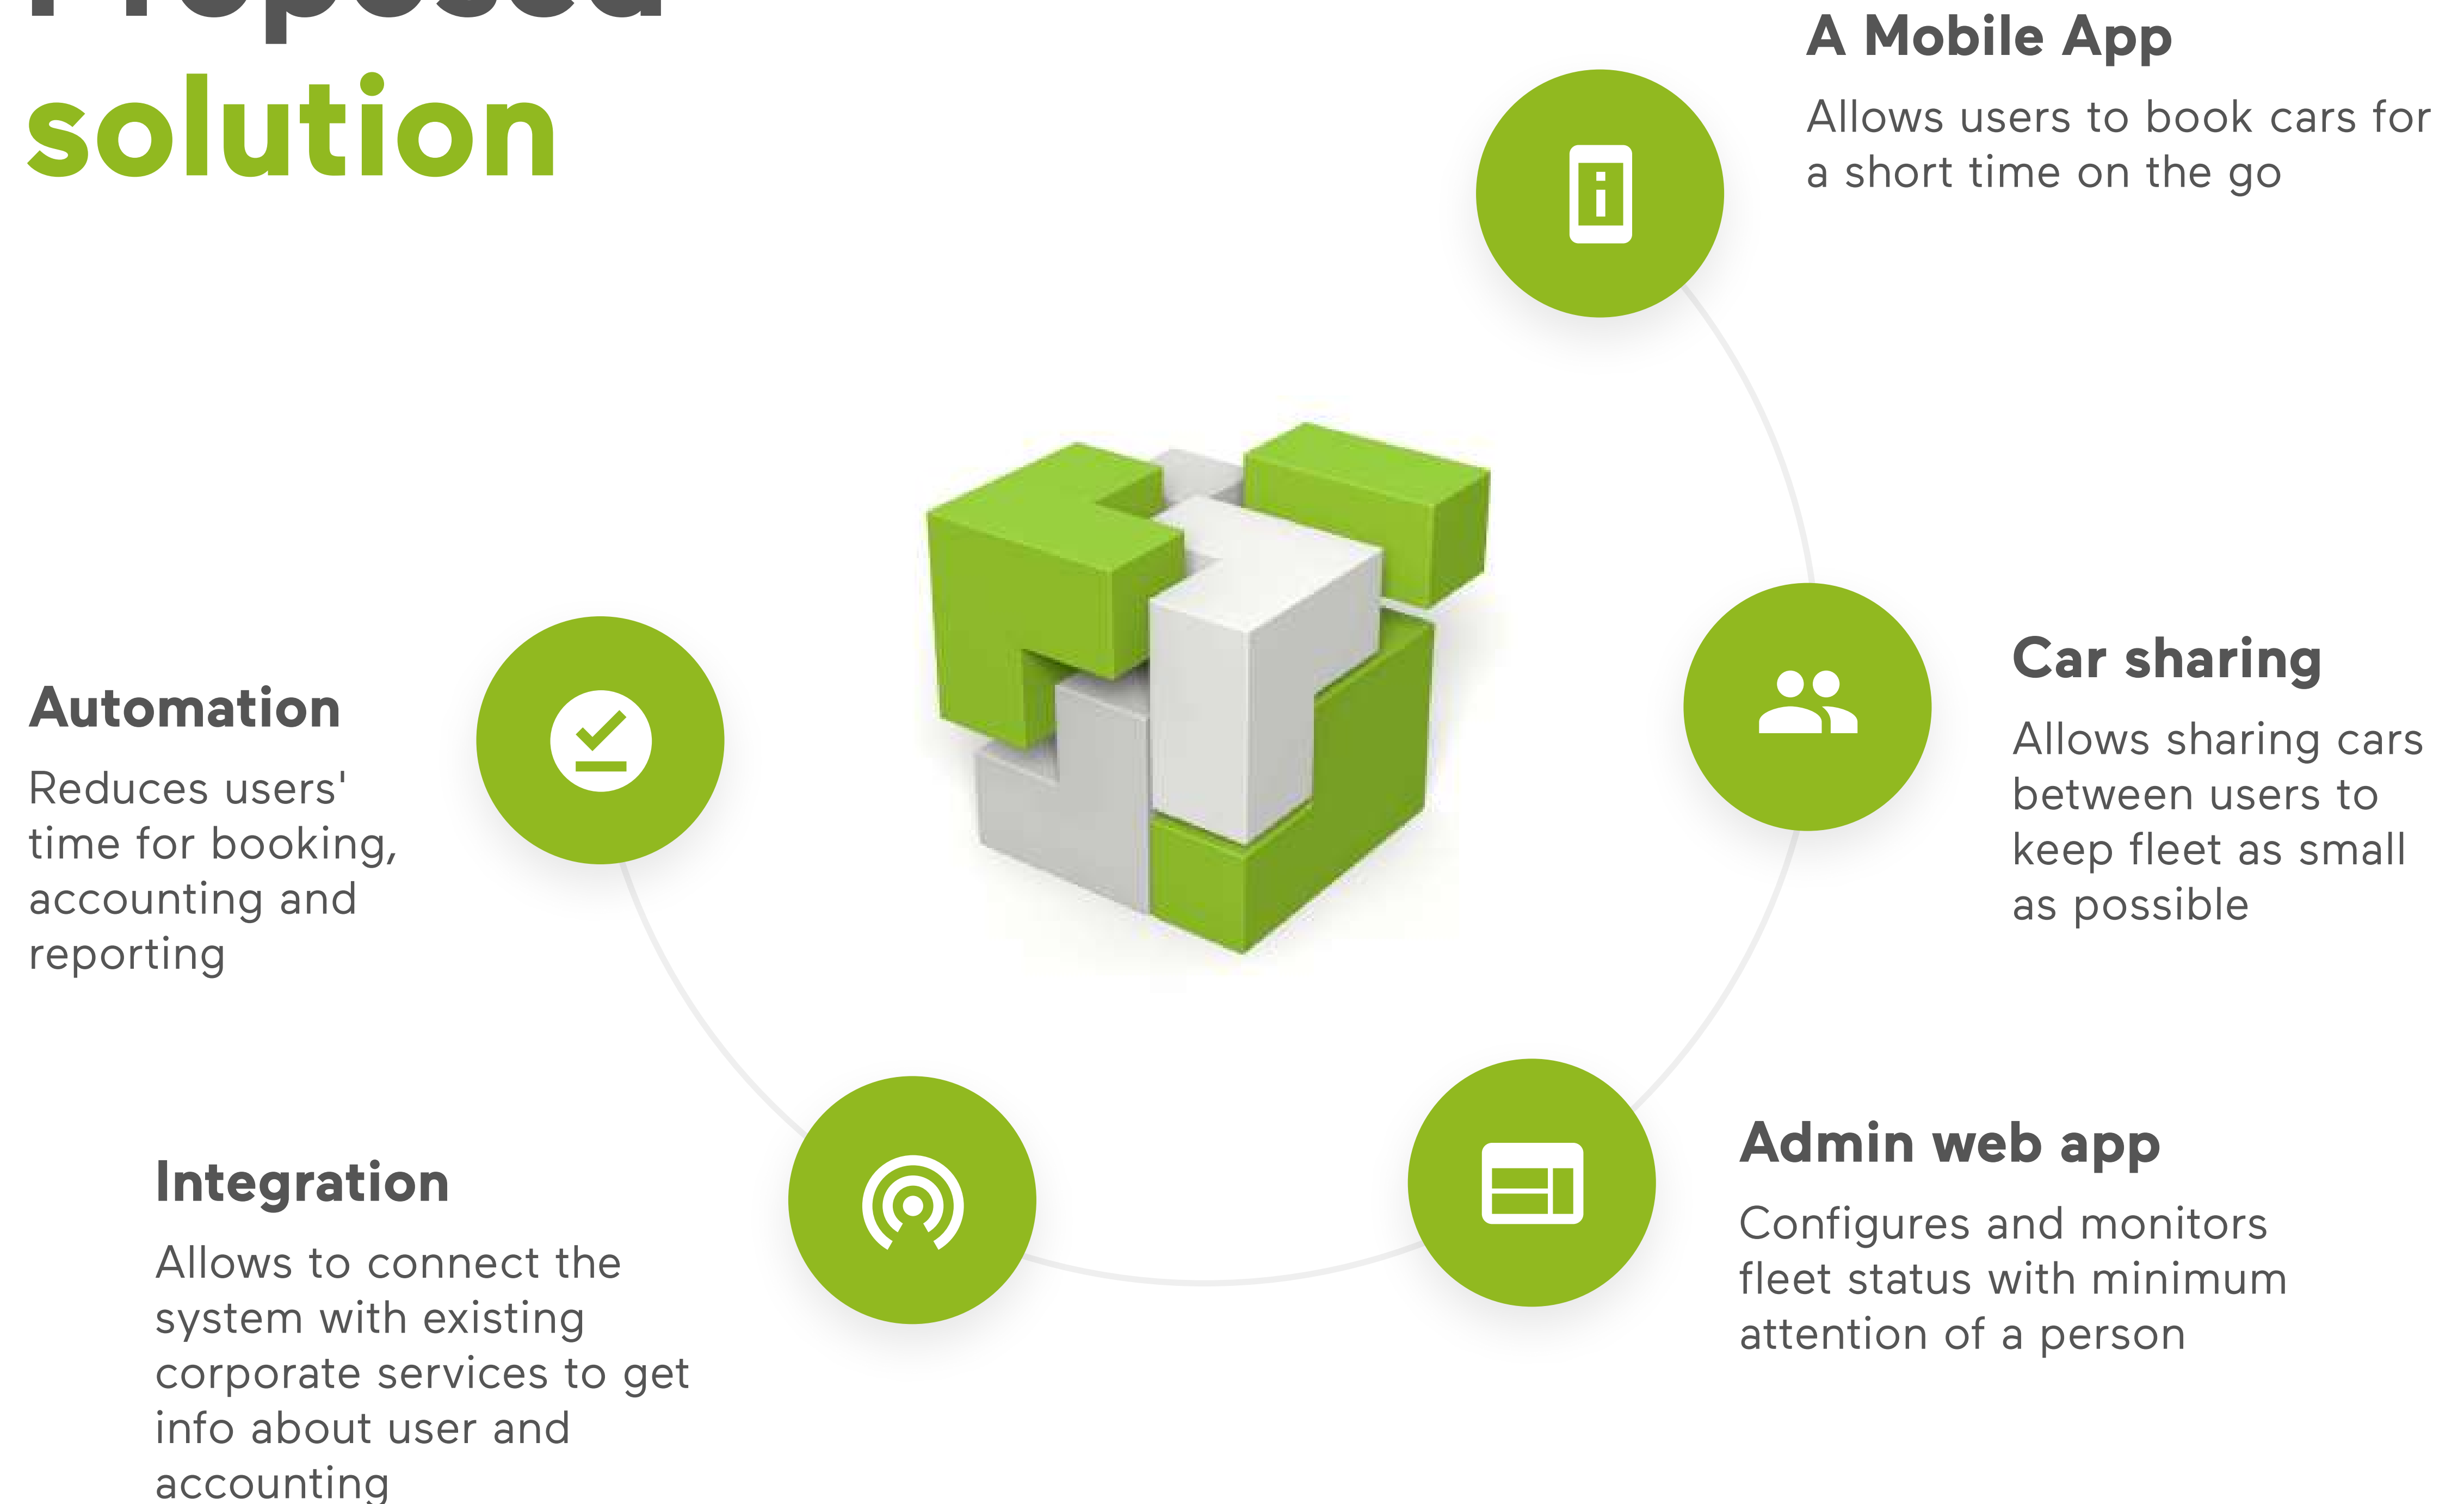

Reducing reporting/accounting
time for an end user

Reusing existing corporate information
about users and accounting

Reducing support costs
for a car fleet

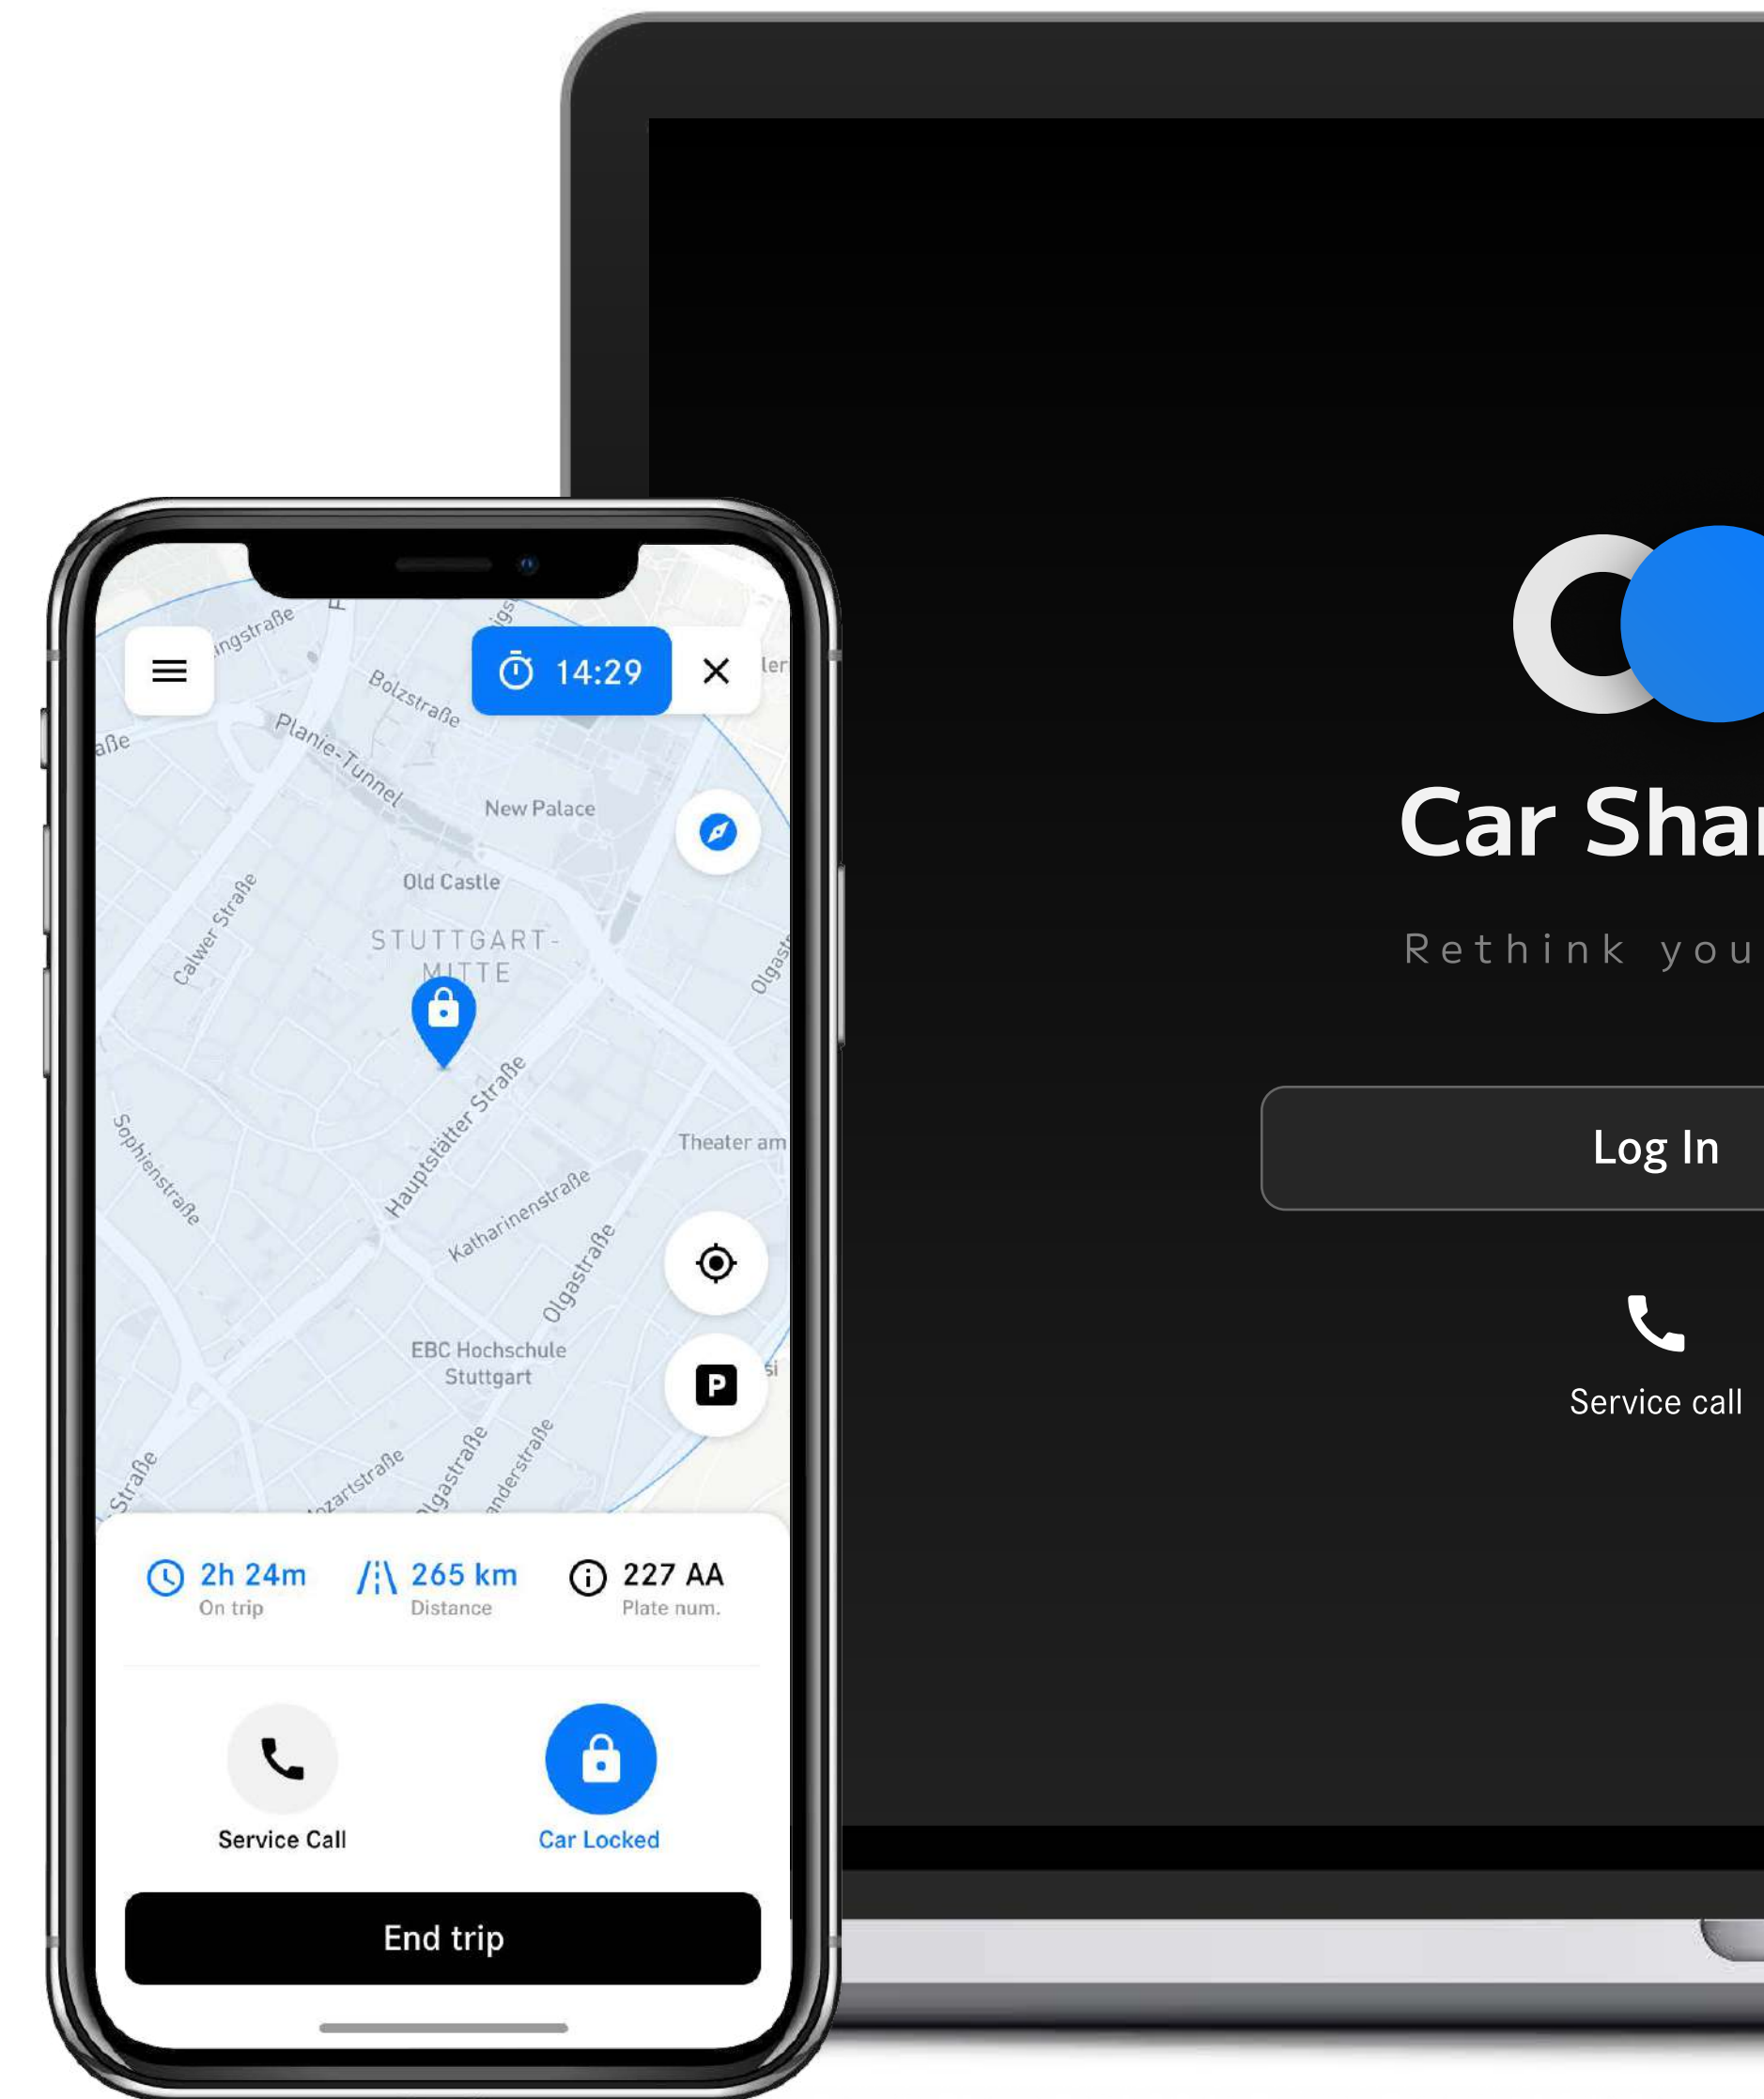

Proposed solution

Technical **stack**

- .NET Core backend deployed to Azure
- Modern single page web application to administrate the system
- Xamarin mobile app to cover both iOS and Android platforms
- Integration with a car manufacturer service to get access to a car (open/close doors, track status)

Outcome

- ✓ The customer **saved up to 50%** on development
- ✓ Equipment operational **costs were reduced by 25%**
- ✓ A few **more business** optimization **opportunities** are found and presented to the customer

- ✓ The **number of vehicles** was **cut by 30%**
- ✓ The **number of people** involved in maintenance **decreased by 50%**
- ✓ A **pilot version** is running in a few locations
